This high school math pathway is patterned after an approach typically seen internationally. Acellus Integrated Mathematics II is A-G Approved through the University of California. This course provides are review of the crucial concepts of real numbers, properties, adding and subtracting, multiplying and dividing, and algebraic expressions. Unit 2 This unit discusses the definition, slope-intercept, point-slope, piece-wise defined functions, and linear models. This unit 3 Within this unit students will learn about zero and negative exponents, multiplying powers, more multiplication properties, and rational exponential functions, exponen multiplying and factoring, multiplying binomials, special products, and how to factor a trinomial. Students through quadratic graphs, quadratic functions, quadratic functions, and completing the square. The unit will also go through the quadratic formula, complex numbers, and systems of linear and quadratic equations. Unit 6 This unit discusses polynomial functions, the fundamental theorem of algebra, math modeling, graphing square root functions, and inverse functions. Unit 7 Students will gain the knowledge of experimental versus theoretical probability in this unit. Additionally, the concepts of probability distributions, permutations, combinate plane, and compound probability, and expected value. Unit 8 Students begin this unit by learning about measuring segments, the coordinate plane, inductive reasoning, conditional statements, and biconditionals, as well as deductive reasoning, and proofs. Following this unit students will learn transversals, parallel lines, proving lines parallel, and the concepts of parallel and perpendicular. Additionally, this unit will introduce students to the angle sum theorem. Unit 10 Within this unit students gain knowledge on congruent figures, the concepts of SSS and SAS, ASA and SAS, ASA and SAS, ASA and SAS, and so congruent figures, the concepts of SSS and SAS, and so congruent figures, the concepts of SSS and SAS, and so congruent figures, the concepts of SSS and SAS, and so congruent figures, the concepts of SSS and SAS, and so congruent figures, the concepts of SSS and SAS, and so congruent figures, and isosceles and equilateral triangles. bisectors, the center of triangles, and indirect proof. Additionally, students will learn about inequalities in a triangle, and inequalities in two triangles. Unit 12 In this unit, students learn about polygon angle sums, parallelograms, proving a parallelograms, proving a parallelogram. additionally learn about trapezoids and kites, polygons and coordinates in proofs. Unit 13 This unit discusses ratios and proportions, similar triangles. Unit 14 In this unit students will learn about pythagorean theorem, special right triangles, and trigonometry. Additionally, the concepts of angles of elevation and depression, and pythagorean identity are introduced. Unit 15 This unit discusses areas of parallelograms and triangles, areas of trapezoids, rhombuses, and kites, as well as areas of regular polygons, and perimeters and areas of similar figures. Additionally, this unit discusses circles and arcs, length of arcs, areas of circles and sectors, and area addition and subtraction. Unit 16 In this unit, students will gain knowledge pertaining to polyhedra, volumes of prisms and cylinders, volumes of prisms and cylinders, volumes of spheres. Unit 17 Within this unit students will learn about tangent lines, chords and arcs, and inscribed angles, as well as the concepts of distance, midpoint, and circles. Following this unit students are presented with the Final Review and Exam.
